Ship Operators**

# **National Research Council – CNR (ITALY)**

## *hosts the 29<sup>th</sup> IRSO Annual Meeting*

**Giuseppe Magnifico**

*Central Management for Planning and Infrastructure*

**29<sup>th</sup> IRSO Meeting - October 10-13, 2016**

***International Center for culture and higher education for scientific research of CNR  
Anacpri (Italy)***

# MARINE SCIENTIFIC NETWORK

## CNR is the largest Research Organisation in Italy

- 7 Departments (Macro-Areas)
- 109 Research Institutes performing research activities and developing capabilities
- 8.195 units of CNR personnel

## CNR “OFFICE FOR PLANNING”

### *Central Management for Planning and Infrastructure*

- It manages the main CNR oceanic research infrastructure
- It is in charge of the scheduling of the oceanographic surveys proposed by CNR researchers
- It coordinates the oceanographic observation system of Platforms, Buoys and long-term mooring stations
- It coordinates national and international cooperation with other organizations

***CNR has about 400 researchers who work in the wider area of marine research***

## EXPERIENCES FROM 16 YEARS OF SOLAR WORK IN ANACAPRI

*(Report from Solar Institute)*

YNGVE ÖHMAN

(Received 22 March, 1968)

### 1. General

In connection with the creation in Anacapri of the foundation San Michele of Axel Munthe in 1950 Swedish institutions were invited to consider the use of the San Michele property for different scientific purposes. The Stockholm Observatory announced its interest and decided to examine the possibility of erecting an institution for solar observations on the island. Simultaneously negotiations were initiated with Italian authorities.

Tests made by the writer in 1950 and 1951 showed that the San Michele property did not offer satisfactory possibilities. A better location was found on the mountain Monte Solaro on a level of 500 metres. Thanks to a generous offer made by the Italian foundation Centro Caprense and its President E. Cerio the headquarters for a Swedish solar observatory could be established for seven years in the old villa Casa Orlandi in Anacapri.

The astronomical activity on the island started with a Swedish expedition early in 1952 for observing the partial solar eclipse of February 25. With the good experience of this expedition the Swedish Academy of Sciences decided to continue the solar work on the island and certain installations were made in Casa Orlandi and on Monte Solaro.

In 1959 the Academy bought a piece of land at Via Fraità in Anacapri situated about 250 metres above the sea level and built a small institution there. The main building which can be seen in Figure 1 was ready at the end of 1960 when the solar patrol instruments were transferred to the new site from Casa Orlandi. A few years later also the instruments placed before on Monte Solaro were moved to the new institution.
